

Azure - Per User MFA Audit

Generated at — July 20, 2026, 1:48 p.m.

1 Run Script

If you have not already, run the following commands to install and run Microsoft Graph and the necessary modules prior to running the Get-Authentication Methods script:

Install-Module Microsoft.Graph.Reports

Install-Module Microsoft.Graph.Beta.Reports

Import-Module Microsoft.Graph

Get-InstalledModule Microsoft.Graph.Reports

Copy / paste this script into Powershell (make sure you run PS as admin):

```
<# .SYNOPSIS Get-AuthenticationMethods.ps1 .DESCRIPTION Exports
user authentication methods report from Microsoft Graph. Determines which
MFA method is set as the default for each user and which MFA methods are
registered for each user. .NOTES Microsoft sucks 99% of the time,
every time. Think about that for a while.>param ( [Parameter(Mandatory
= $true)] [string]$CSVPath, [string]$GroupId = "")Install-Module

$User.IsSsprCapable                    IsSsprEnabled
= $User.IsSsprEnabled                  IsSsprRegistered
= $User.IsSsprRegistered
IsSystemPreferredAuthenticationMethodEnabled =
$User.IsSystemPreferredAuthenticationMethodEnabled
LastUpdatedDateTime                    = $User.LastUpdatedDateTime
} } # Output custom object to GridView $Report | Out-GridView
-Title "Authentication Methods Report" # Export custom object to CSV
file $Report | Export-Csv -Path $csvPath -NoTypeInformation -Encoding
utf8 Write-Host "Script completed. Report exported successfully to
$csvPath" -ForegroundColor Green} catch { # Catch errors Write-Host
"An error occurred: $_" -ForegroundColor Red}

```

2 Output

- You will be prompted to enter a file path for the .csv of the Get-AuthenticationMethods audit to be stored.

```

PS C:\WINDOWS\system32> C:\Users\bjoseph\OneDrive - XL.net\Desktop\Scripts\Get-AuthenticationMethods.ps1
cmdlet Get-AuthenticationMethods.ps1 at command pipeline position 1
Supply values for the following parameters:
CSVPath: C:\Users\bjoseph\Downloads

```

- You will be prompted to authenticate with O365, use a global admin account.
- You can open the output file at the path you entered once complete, but it will also open automatically.
- Save the output as XLSX to the clients G Drive > Documents folder

OUTPUT:

Authentication Methods Report

- If there are accounts that have been recently terminated, or added, review previous tickets and the new hire/termination guide to ensure the correct steps are being followed. Raise any issues in your one-on-one if steps are missed.

- If there are an excessive amount of accounts to review once filtered, **it may be best to schedule a time with the POC to review the results and get a decision on each account.** Feel free to add a column to track what action is to be taken for each account.
- Do not send the audit spreadsheet to the client unless it's requested, then [send the attachment via SendSafely](#).
- Once you have a decision from the POC for the actionable accounts, carry out whatever the action may be (enforcing MFA, removing an unnecessary license, disabling an inactive account, etc)
