

MS365 - Checking For Shared Mailboxes With Sign-In Allowed

Generated at — July 20, 2026, 1:52 p.m.

1 Prerequisites

- PowerShell 7 installed
- Exchange Online Administrator or Global Administrator access
- User Administrator or equivalent Entra ID permissions

2 Run the script

Copy/paste and run in Powershell, or download as a .ps1 file

Script

```
# Required modules
$requiredModules = @( "ExchangeOnlineManagement",
"Microsoft.Graph.Authentication", "Microsoft.Graph.Users")foreach
($module in $requiredModules) { if (-not (Get-Module -ListAvailable -
Name $module)) { Write-Host "[INFO] Installing required module:

```

3 Step by step

1. Open PowerShell 7 or Windows PowerShell.
2. Paste and run the script from the previous step
3. When prompted, authenticate using the client's xladmin credentials.
4. Note that two sign-in prompts may appear.
5. The script may take several minutes to complete. Larger Microsoft 365 tenants with more accounts will take longer to process. Please allow the script to run uninterrupted until completion.
6. The script will report whether any shared mailboxes with sign-in enabled were detected.

7. If shared mailboxes are found, the script will prompt:
 - Do you want to disable sign-in for all shared mailboxes? (y/n)
8. If there are no known reasons to keep sign-in enabled for the listed shared mailboxes, enter y to disable sign-in.
9. If any mailbox requires sign-in to remain enabled, enter n, then review the mailbox with the SA or client POC before making changes.

```
